

ARSB

Amateur Radio Society Bangladesh

An Insightful Interview with Mr. Muneen Rana (S21R)

On December 18, 2024, Mr. Muneen Rana, the former General Secretary of both the Bangladesh Amateur Radio League (BARL) and the Bangladesh Computer Society (BCS), shared his extensive experiences in an enlightening interview. His insights are invaluable for both novice and experienced amateur radio enthusiasts, also known as "hams."

Mr. Rana has been deeply involved in amateur radio activities both in Bangladesh and the United States. His journey began in Bangladesh, where he first discovered the fascinating world of amateur radio. With a passion for communication and technology.

The Art of Astrophotography

Mr. Rana's exploration of the universe through astro photography extends to capturing the dynamic and mesmerizing images of the Sun. The Sun, an ever-active celestial body, provides numerous opportunities for astro photographers to observe and document its various layers. Mr. Rana has successfully captured images of the Sun's three primary layers: the corona, photosphere, and chromosphere.

His passion for both astrophotography and amateur radio highlights the interwoven nature of science and technology. By combining these two hobbies, he not only deepens his appreciation for the universe but also enhances his understanding of how technology can bridge seemingly disparate fields. This interdisciplinary approach enriches his experiences and fosters a broader perspective on the wonders of our world and beyond.

Advice for New and Existing Hams

Mr. Rana's experiences offer valuable lessons for both new and experienced hams. He emphasized the importance of continuous learning and experimentation in the field of amateur radio. He encouraged newcomers to actively participate in local clubs and events, as these provide opportunities for networking and skill development.
